2614				
MAIL DATE		DELIVERY MODE		
03/18/2009		PAPER		

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

10/587,488

**Applicant(s)**

GUSTAVSSON, STEFAN

**Examiner**

DISLER PAUL

**Art Unit**

2614

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 12/17/08.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-2/4-5; 7-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-2, 4-5; 7-16; 17-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-8508)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Response to Argument*

In regard to the Applicant's argument wherein claim feature wherein "actively damping the receiver while the speaker is active , by controlling voltage or current applied to the receiver such that movement of a membrane of the receiver is suppressed to actively reduce acoustic leakage from the reduce acoustic leakage from the receiver when the speaker is active". Lechner does disclose of such feature wherein {(fig.1-3. wt (5,9); page 2 par[0018] at line (28); par [0018,0020]/ with the amplifier which may be turned off/on thus control the flow of current to speaker so as to actively reduce acoustic leakage while the speaker is operated and thus implicitly/inherently causing such a reduction of the movement of the membrane of the receiver to be suppressed with/as a result of having no signal/vibration to produce movement of the membrane as result of the buzzing synonymously the(vibration) signal).

However, in view of the new ground rejection of claims 11, 13, 16, this rejection is made non-final.

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-2,4-5,7-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Lechner ("US 2006/0262945 A1).

Re claim 1, Lechner disclose of the portable electronic device, comprising: a speaker (fig.1-4(3)) and a receiver (the headset speaker 2 in fig. 1-4) for sound reproduction, the speaker and receiver sharing a back volumes space within the portable electronic device (fig.1-4 wt (3,2); page 1 par[0002]/with shared circuit wt (8)) ; and a control unit to: actively damp the receiver while the speaker is active (fig.1-3. wt (5,9); page 2 par[0018] at line (28); page 1 par[0010] line 12-15/control either speaker/receiver during operation of speaker, e.g., actively damp the receiver 2 (i.e., turning off the headset speaker 2) while the speaker is active (i.e., while the speaker 3 is on) and by controlling voltage or current applied to the receiver such that *inherently* movement of a membrane of the receiver is suppressed to actively reduce acoustic leakage from the receiver when the speaker is active (fig.1-3 wt (4-5); par [0018,0020, 0002]/the amplified speaker

may be turn on/off thus allow only acoustical sound to earpiece and thus implicitly/inherently causing such a reduction of the movement of the membrane of the receiver to be suppressed with/as a result of having no signal/vibration to produce movement of the membrane as result of the buzzing synonymously the (vibration) signal).

Re claim 2, the device of claim 1, where said control unit controls switching between speaker mode and sound receiver mode (fig.1-4 wt (5,9); par[0002,0018]).

Re claim 4, the device of claim 1, where the device include a cellular phone, a smart phone or a communicator (par[0002]).

Re claims 5, 15 have been analyzed and rejected with respect to claim 1.

Reclaim 7, the method of claim 5, wherein switching between speaker mode and sound receiver mode to provide damp the receiver while the speaker is active (fig.1-2 wt(5,9)/controlling receiver while speaker active/operation).

Re claim 11, the device of claim 12, where the control unit constrains a diaphragm of the receiver to a fixed position to actively damp the receiver (again see fig.1-2 w(5,9)/controlling receiver while speaker active/operation/when the controller is shut off the vibration unit is stop/thus, inherently remain at particular position fixed).

Similarly, Re claims, 13, 16 has been analyzed and rejected with regard to claim 11.

Re claim 8, the device of claim 2, where the device includes a cellular phone, a smart phone or a communicator (par[0002]).

Re claim 9, the method of claim 5, where the portable electronic device includes a cellular phone, a smart phone or a communicator (par[0002]).

Re claim 10, the method of claim 5, further comprising: switching between speaker mode and sound receiver mode to damp the receiver while the speaker is active fig.1-2 wt(5,9)/controlling receiver while speaker active).

Re claim 12, Lechner disclose of the portable electronic device, comprising: a speaker (3 in fig. 1) and a receiver (the headset speaker 2 in fig. 1) for sound reproduction, the speaker and receiver sharing a back volumes space within the portable electronic device (fig.1-4 wt (3,2); page 1 par[0002]/with shared circuit wt (8)) ; and a control unit to: actively damp the receiver while the speaker is active (fig.1-3. wt (5,9); page 2 par[0018] at line (28); page 1 par[0010] line 12-15/control either speaker/receiver during operation of speaker, e.g., actively damp the receiver (i.e., turning off the headset speaker 2) while the speaker is active when actively damping the receiver , the control unit inherently suppresses movement of a membrane of the receiver (i.e., while the speaker 3 is on; fig.1-3 wt (4-5); par [0018,0020, 0002]/the amplified speaker may be turn on/off thus allow only acoustical sound to earpiece and thus implicitly/inherently causing such a reduction of the movement of the membrane of the receiver to be suppressed with/as a result of having no signal/vibration to produce movement of the membrane as result of the buzzing (vibration signal)).

).

RE claim 14, has been analyzed and rejected with respect to claim 12 respectively.

Re claim 17, Lechner disclose of the device, comprising: a first speaker to output sound indicating that an incoming communication has been received; a second speaker to output sound associated with use of the device, the first and second speakers sharing an enclosure within the device; an a control unit to: actively damp the second speaker while the first speaker is active, where when actively damping the second speaker, the control unit controls a current or voltage supplied to the second speaker and further wherein when actively damping the second loudspeaker, the control unit is configured to control a current or voltage supplied to the second speaker such that the movement of a membrane of the second loudspeaker is suppressed when the first speaker is active (see claim 12 rejection).

Re claim 18, the device of claim 15, wherein the control unit is further configured to: switch between a first mode when an incoming communication is received and a second mode when no

incoming communication is being received (par[0002,0018]/buzzer and communication speaker via switched).

Re claim 19, the device of claim 18, wherein the second mode, the control unit is configured to not damp the second speaker.

Re claim 20, the device of claim 15, wherein the device comprises a cellular phone, or a communicator (par[0002]).

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Disler Paul whose telephone number is 571-270-1187. The examiner can normally be reached on 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chin Vivian can be reached on 571-272-7848. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
